This kratom strain originated from the Southeast Asia islands of Bali and is known for its potency levels, which are locked in during the drying period. Once the leaves are harvested from the *Mitragyna Speciosa* trees, they will go through a drying process. It is during this time that the strain will lock in its alkaloid potency. Green Bali contains more than 25 alkaloids with mitragynine and 7-hydroxymitragynine being the most prominent.

Green Dragon Kratom is a proprietary and versatile blend. It was first blended by a company called Maya Distribution LLC several years ago. The original recipe was a mixture of several different green vein strains. The blend proved to be so popular that a number of other suppliers followed suit. Because Green Dragon Kratom is a mixture of several different strains, the effects may vary from one batch to the next.

Green Elephant Kratom is considered a well-balanced strain that possesses different properties that can suit practically any user's needs. The strain is grown in the Northwestern areas of Sumatra Island in Indonesia and is named after its appearance, specifically, because its leaves are larger and oversized compared to average kratom leaves. They also mimic an elephant's ear in shape.

Green Harmony Kratom is a particularly potent strain of Kratom which has been specifically bred for high levels of naturally occurring alkaloids such as Mitragynine and 7-Hydroxymitragynine.

Green Hulu a staple in the kratom world. Hulu Kratoms' natural habitat is the riverbanks of the Kapuas river. The remoteness of the area makes it difficult to harvest. Green Hulu is a popular choice among most kratom users; it's just a matter of finding it as the strain can be hard to find at certain times of the year.

Green Malay kratom is in high demand and is sometimes referred to as a "super-strain." It's a durable, hearty strain that can survive even the most unfavorable environmental conditions. You can find this kratom growing in the high Malaysian mountains where most other kratom can't survive. Green Malay leaves are a darker hue compared to other green vein kratom strains due to their level of maturity.

Green Kali is a green vein kratom strain that is currently very uncommon. There is a much higher variety of different alkaloids in Green Kali than most kratom strains. Green Vein Kalimantan Kratom, or Kali as locals call it comes from Borneo island which is located north of Java, west of Sulawesi, and east of Sumatra. The island is politically divided among three countries: Malaysia and Brunei in the north, and Indonesia to the south. Green Kali is a perfect fit for those who want to go beyond typical qualities of *Mitragyna speciosa*.

Green King Kratom Powder is made from the Green Vein Kratom that has a ton of distinctive benefits from other types of strains.

Green Maeng Da is a very popular and balanced kratom strain. The word “Maeng Da” is a slang term that translates to “pimp” in Thai. This implies that the Maeng Da class is reserved for only the strongest kratom leaves available. If you like the balanced nature of green vein kratom strains and want something extra potent give this strain a try.

Green Sumatera (Sumatra) kratom is one of the most popular green vein kratom strains on earth. Green Sumatera kratom hails from Sumatra is one of the larger islands in Indonesia, known for its lush tropical jungles, volcanoes, and abundant wildlife. A balanced strain, Sumatra kratom is generally known for being potent, because of the natural abundance and biodiversity on the island of Sumatra, the plants that grow there are often very healthy.

Green Vietnam kratom originates from Southeast Asia in Vietnam and is known for having a much more balanced profile than other kratom strains. The jungle climate and favorable environment for growth affect the qualities and characteristics of this strain in a very positive way. It's suggested that the rich minerals from this region's shoreline nourish the kratom in such a way that it gives the leaves their unique set of effects.

Maeng Da is a particular strain of kratom which is native to parts of Thailand. Many users consider this to be one of the best strains of kratom, due to its extreme effects, and the high concentration of kratom alkaloids. Many users consider this to be one of the best strains of kratom, due to its extreme strength, potency, effects, and the high concentration of kratom alkaloids. The phrase “Maeng Da,” when roughly translated from the Thai language, means “pimp strength.” It's by far one of the strongest kratom products on the market.

## 61 DIFFERENT STRAINS & BLENDS

### MAENGDA SUPREME

SKU – SGM011306  
SUPER GREEN

Maeng Da Supreme kratom is sourced from the oldest, most mature kratom trees that are grown in the most fertile regions of Southeast Asia. After the Maeng Da leaves are harvested from the trees, before they are dried, the veins and the stems are separated from the green part to ensure that only those parts get into the crushing process that has the best overall alkaloid concentrations. No doubt, the final product is ranked the highest on our kratom inventory.

SKU – SGM011307  
SUPER GREEN MALAY

Native to Indonesia, Super Green Kratom is the product of two strains being mixed. It is suggested that the two strains used to create Super Green are Green Malay and Green Indo. This strain of kratom is very potent and goes through a specialized drying process. It is during this process that the alkaloids are locked in. Super Green Kratom is known for its longevity and wellness support.

SKU – SGM011308  
SUPER GREEN MAENGDA

Cultivated from Malaysia's dense mountain ranges that boast of abundant trees and fertile soil, it is called "super" for the larger than usual size of its leaves. Lastly, "green" does not only describe the color of the leaves itself but also its veins. Super Green Malay is a great example of an in-between strain of reds and whites. It has a well-balanced alkaloid profile in the mid-ground between Red Bali and White Borneo. The soil from the mountains provides Super Green Malay its uniquely high alkaloid content.

SKU – SGM011309  
GOLD

Super Green Maeng Da Kratom is a variant native to Thailand. It is a particularly potent strain of Maeng Da which has been specifically bred for high levels of naturally occurring alkaloids such as Mitragynine and 7-Hydroxymitragynine. Super Green Maeng Da provides many of the same benefits as regular green Maeng Da except that 'super' strains contain a higher alkaloid concentration.

SKU – SGM011310  
RED BALI

The term "gold" doesn't refer to the leaf vein coloration. There isn't any gold vein kratom growing somewhere in Southeast Asia. The reason it's called a "gold" kratom is to distinguish it from the other varieties that are strictly red, green, and white. It's a different product that combines two or more colors, creating something unique. Gold kratom is a hybrid blend resulting from unique processing.

SKU – SGM011311

Red Bali Kratom Powder is a Red Vein Kratom that is said to be grown in Bali, but really has earned that name due to the effects it's said to produce. Red Bali kratom has always been one of the most popular varieties of red vein kratom. This strain is balanced and provides the full range of kratom effects.

SKU – SGM011315

### RED HORN LEAF MAENGDA

SKU – SGM011316

### RED HULU

SKU – SGM011317

Red Borneo kratom comes from the Southeast Asia Island of Borneo. A well rounded Red Vein Strain this kratom strain goes through a fermentation process that uses sunlight and water. This process will enhance the concentration of 7-hydroxymitragynine and the alkaloid Mitragynine Pseudoindoxyl. The fermentation process is extremely important to this strain, as it enhances its potency levels.

Red Dragon kratom is grown in Thailand, and as such is not that much different from its popular cousin, Red Thai kratom. The Kratom powder itself has a slight red hue, which is the result of the fermentation process the leaves go through post-harvest. The main change that happens during this process is the conversion of one of the main alkaloids, mitragynine, to 5-OH-mitragynine. 5-OH is much more relaxing and sedating than regular mitragynine. That said, Red Dragon is known to be a bit more stimulating than other red vein kratom strains from Thailand.

Red Elephant kratom is a popular novelty strain of kratom. The reason red elephant kratom is special is that the leaves are much bigger than the average leaf, hence the name “elephant.” Elephant kratom strains possess abnormally large leaves. Red elephant kratom contains a higher concentration of alkaloids like 7-OH-mitragynine and mitraphylline. These alkaloids produce more relaxing benefits as opposed to some of the more stimulating effects people experience when using green vein or white vein kratom strains.

Red Harmony Kratom is a particularly potent strain of Kratom which has been specifically bred for high levels of naturally occurring alkaloids such as Mitragynine and 7-Hydroxymitragynine.

The Red Horn Leaf Kratom strain is native in many Southeast Asian countries such as Thailand, Indonesia, and Borneo. It is a highly rare strain that is believed to be a hybrid of the Red-veined and the Maeng Da strains. Also called as ‘tri-horned’ or ‘spiked leaf’, the Red Horn leaves have jagged tip similar to Maeng Da leaf. Red Horned Leaf Maeng Da is probably among the rarest strains as horned leaves are very rare to find.

Red Hulu Kratom is a highly sought after kratom strain that comes from red-veined kratom leaves that are native to areas around the island of Borneo in Indonesia. Red Hulu, along with other Hulu Kapuas varieties, is significantly harder to obtain than other kratom strains. The reason is that it only grows in one place, the forest along the Hulu river bank.

## 61 DIFFERENT STRAINS & BLENDS

### RED INDO

SKU – SGM011318  
RED JONGKONG

A premium single strain, Red Indo kratom originates in the nutrient-rich soils of Indonesia. The nutrients in the soil come from the volcanic activity in the region over thousands of years and this is what gives the Indo Kratom strain its unique set of characteristics. A popular strain thanks to its potent alkaloids.

SKU – SGM011319  
RED KING

A rare & exotic kratom strain, Red Jongkong kratom is sourced from the Jongkong jungle. It's harvested from old kratom trees growing naturally in the jungle. The Jongkong jungle is actually a part of Kalimantan Barat in India. This part of Indonesia is where the Kapuas River flows. This is a lush and healthy area known for its productive vegetation. While Red Jongkong does have a slightly red tint, it's still closer to a green vein kratom in terms of its effects.

SKU – SGM011320  
RED MAENGDA

Native to Thailand and Indonesia Red King can technically grow anywhere there is a humid environment and moist soil. This particular strain is taken by many kratom users mainly because of the number of positive benefits it potentially can provide.

SKU – SGM011321  
RED MALAY

Red Maeng Da is a premium variety of red vein kratom offering notoriously strong effects. All Maeng Da kratom are the strongest in their respective categories. Red Maeng Da can be found in various regions of Southeast Asia, where it thrives in hot, humid environments. This strain is grown in many different places, but the name is reserved for only the strongest varieties from each region. Even the smell of Red Maeng Da is quite pungent.

SKU – SGM011322  
RED SUMATERA (SUMATRA)

As the name suggests, Red Malay Kratom traces its roots from the lush, tropical evergreen forests of Malaysia that are known for their high rainfall, humidity, acidic, and nutrient rich soils. Popularly known as "Ketum" in local Malaysian dialect, Red Malay Kratom is considered a "slow-burning" type of strain meaning that it lasts a remarkably long time compared to other strains.

SKU – SGM011323

Red Sumatera (Sumatra) comes from one of the globe's largest inhabited islands, Sumatra. More than 50 million people live on this Indonesian island. Red Sumatera kratom is known for being one of the most relaxing strains of red vein kratom.

### WHITE BALI

SKU – SGM011329

One of the most popular strains of kratom is known as Red Thai kratom. As the name implies, this variety is grown in Thailand and has red-colored veins. Red Thai kratom is known to have a higher concentration of 5-HO-mitragynine than Green Thai kratom. As such, you can expect it to be a bit more relaxing.

Red Vietnam kratom, unsurprisingly, comes from Vietnam, where the dense and humid forests are ideal for kratom growth. Red Vietnam kratom is a very potent red strain. Experts believe there are more than 25 alkaloids present in Red Vietnam kratom, including mitragynine, 7-hydroxymitragynine, paynantheine, isomitraphylline, mitraphylline, ajmalicine, and speciogynine.

One of the rarest kratom varieties on the kratom market, Super Red Kratom is loved for its potency and effects. Super Red Kratom is thought to be made from the most mature kratom leaves that are located at the very top of the kratom tree. These leaves are the biggest and have the highest alkaloid content compared to other kratom leaves. Once these leaves are picked, they are washed thoroughly and fermented using a special process that contributes to its high alkaloid concentration. It is then dried and crushed.

Premium Bali Kratom Powder originates from Bali Island in Indonesia. The Bali variation of the *Mitragyna Speciosa* trees has wide and thick leaves. Premium Bali is a red strain although in most cases the powder is lighter in color than a typical red kratom powder. The hillsides of Bali are thick with molten ash, which adds flavor to the leaves.

Chocolate Borneo is harvested from Borneo, Indonesia and is of a rare variety. The name alone is enticing, but the relaxing properties of Chocolate Borneo Kratom powder make it a delectable delight. The powder itself is harvested only from mature leaves which undergo a fermentation process that causes the color to turn dark and affects its alkaloid profile. This unique process results in one of the “slowest” strains available.

White Bali Kratom is usually grown in the dense forests of Sumatra and Borneo however the strain originated from Bali, hence the name. It is thought that between 25-30 alkaloids are present within the White Vein Bali kratom strain. In this variety of kratom, the amount of mitragynine is significantly higher than others. The energizing effects are also more prominent in this variety due to the lower concentration of 7-hydroxymitragynine.

### WHITE HARMONY

SKU – SGM011335

This strain of kratom is sourced from the tropical jungles of Borneo and is believed to be kratom which is harvested earlier on during the growing season — when the veins on the kratom leaves are still white in color.

White Dampar is harvested throughout Indonesia and is one of the more unique white vein strains. Found to be one of the strongest white strains and exceptionally well-balanced. It serves as both a “fast” strain and a “slow” strain.

White Diamond Kratom powder is a precisely crafted gem of a strain. It is a pristine and focus balanced White kratom strain.

White Dragon is a very special strain of kratom. It’s created by combining two highly potent strains — White Maeng Da and White Elephant. Combining these two potent strains creates a perfectly balanced variety. It shares many of the same strong benefits and effects as these two strains.

What makes this strain exotic is that the kratom plant has enormous leaves with beautiful white veining akin to elephant ears (hence the name). It’s a rare strain. White Elephant is an unparalleled mitragyna strain according to many kratom enthusiasts. It is often described as being a blend of red, white, and green vein kratom in aroma and appearance. The alkaloid content of White Elephant is also higher than usual, especially for a white kratom strain.

White Harmony Kratom is a particularly potent strain of Kratom which has been specifically bred for high levels of naturally occurring alkaloids such as Mitragynine and 7-Hydroxymitragynine.

### WHITE MALAY

SKU – SGM011341

White Horn Leaf Maeng Da is a particular type of leaf which has a unique shape. Unlike regular leaf, it does not have a symmetrical margin. These leaves have an irregular shape making them very prominent at first glance. In the case of Maeng Da, the horned leaves are an indication of extra benefits.

White Hulu kratom — also referred to as White Kapuas kratom — is a relatively uncommon strain of white vein kratom which grows on the banks of the Kapuas River in Indonesia. The soil alongside this river is thought to be sacred by locals, which is part of the reason this strain is so rare and prized and why this strain has such a robust alkaloid profile.

White Indo is also referred to as “White Vein Sumatra.” This is because it originates from Indonesia’s warm, damp regions and is typically found on Sumatra island.

Native to Thailand and Indonesia White King can technically grow anywhere there is a humid environment and moist soil. This particular strain is taken by many kratom users mainly because of the number of positive benefits it potentially can provide.

White Maeng Da is a popular strain of white vein kratom, as it contains higher levels of active flavonoids and alkaloids compared to other varieties.

White Malay Kratom is a strain that hails from Malaysia and is produced and processed in a manner that encourages the production of more stimulating alkaloids.

SKU – SGM011345

### YELLOW BORNEO

SKU – SGM011346

### YELLOW ELEPHANT

SKU – SGM011347

White Sumatera (Sumatra) is an extremely popular and sought-after strain of kratom. This strain grows on the island of Sumatra where kratom trees grow in ancient forests, and their leaves are packed full of active alkaloids.

White Thai Kratom also referred to as White Vein Thai is a variety of kratom known to be among the most stimulating category of kratom. White Thai kratom contains a high concentration of the primary alkaloid mitragynine and other alkaloids (as many as 40 have already been identified).

White Vietnam kratom grows along the Mekong River in Vietnam, an area dense in nutrients. Its quality and alkaloid content is very high, making this strain unique and highly sought after.

The term Super White Kratom is used to describe a processing method and not a unique strain. It is for this reason that you might find anything from Super White Maeng Da to Super White Indo, Super White Borneo, and other “Super” variants, depending on the vendor. In a general sense, Super White Vein Kratom is considered to contain a higher amount of alkaloid.

Hailing from the rich, tropical jungles on the island of Borneo Yellow Borneo Kratom is made by drying or fermenting the white kratom leaves for a bit longer. This fermentation process converts alkaloids making Yellow Borneo Kratom a very well-rounded kratom strain.

Yellow Elephant Kratom is a lesser-known variety. It is a powerful strain with effects that sit somewhere between red and green strains.

### YELLOW SUMATERA

SKU – SGM011351

### YELLOW THAI

SKU – SGM011352

### YELLOW VEIN

SKU – SGM011353

Yellow Horn kratom is actually a rare variety of white-vein kratom. It gets its yellow color and name from a unique drying process. Yellow Horn kratom growers leave the white leaves in the sun for several days to cure, changing their alkaloid profile slightly and giving them their distinctive hue. The “horn” part of the name refers to small spikes around the perimeter of the particular white strain used to make Yellow Horn kratom.

Yellow Jongkong is a relatively new strain that hails from the Jongkong jungle in Indonesia which has rich soil containing valuable nutrients that are hungrily sucked up by the Kratom trees in the region. This is why Jongkong Kratom strains are such a fantastic strain.

Maeng Da translates to “pimp grade.” As the name suggests, Maeng Da kratom is of high quality. Yellow Maeng Da may use different white, green, or red ratios in creating the strain.

Yellow Sumatera (Sumatra) kratom is harvested from the jungles of Sumatra, Indonesia and is considered a prized strain. The Yellow Sumatera strain is put through a natural fermentation process that brings about a chemical transformation. The fermentation process allows some of the alkaloids to oxidize and convert into 7-OH-mitragynine and speciogynine resulting in a very effective, well balanced strain.

As the name suggests, Yellow Thai kratom hails from Thailand where lush jungles support the growth of strong, healthy kratom trees that produce alkaloid-rich leaves. Yellow strains are generally left to sit for two days. This allows for a good portion of the conversion of mitragynine into 7-OH-mitragynine to complete. The unique alkaloid profile of Yellow Thai Kratom makes it one of the more popular strains of yellow.

In Indonesia, farmers are making Yellow Vein kratom by fermenting red kratom leaves, while others are mixing two or more kratom types together. The effects of Yellow Vein kratom vary substantially but the consensus is that they're closest to green vein strains. Overall, Yellow Vein kratom is a pretty well-rounded strain.

# 2023 KRATOM PRODUCT GUIDE

## 61 DIFFERENT STRAINS & BLENDS

### YELLOW VIETNAM

SKU – SGM011354

As the name suggests, Yellow Vietnam kratom originated in Vietnam however in Indonesia, yellow kratom is the result of fermenting red vein leaves for a couple of days resulting in a chemical conversion due to the kratom being exposed to light and heat. This process gives yellow strains a different set of effects that make them distinct from other red vein products. Another way it's produced is by mixing together Red Vietnam and Green Vietnam Kratom.

**PACKING:** BULK in 20 or 25 kg cartons
